#### **DETAILED ACTION**

## Response to Amendment

1. This action is responsive to an amendment filed on 10/10/2006. Claims 1-9 and 16-40 are pending. Claims 10-15 have been previously cancelled.

## Response to Arguments

2. The arguments filed in the 10/10/2006 Remarks have been fully considered but are moot in view of the new ground(s) of rejection which is deemed appropriate to address all of the needs at this time.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.

Art Unit: 2614

- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 1-6, 8, 16-21, 23, 25-30, 32, 34-37 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Le Gendre** et al. (U.S. Patent No. 7,099,657) in view of **Miyashita** (U.S. Pub. No. 2002/0019225).

Regarding claims 1, 16 and 34, **Le Gendre** teaches a method of automatically populating a contact database in a mobile communication device configured to communicate voice and data over a wireless network, the method comprising, in response to a call event representing a voice call involving the mobile communication device:

receiving [i.e., obtaining] a telephone number associated with a voice call involving the mobile communication device (FIGURE; col.2, lines 17-18);

when a data connection is established between the mobile communication device and a data server [i.e., remote processing system] (FIGURE) via the wireless network, then automatically and without any user input obtaining information [i.e., data] associated with the telephone number via the wireless network (col.2, lines 19-24, col.3, lines 58-67, col.4, lines 1-3).

Le Gendre teaches a directory (col.3, lines 58-64). However, it is not clear whether Le Gendre teaches storing the data in the contact database. Miyashita teaches storing the directory data of records [i.e., data] in the storage unit [i.e., contact database] (page 2, paragraphs 0020, 0021) after Le Gendre teaches that such data is retrieved according to the telephone number. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was

Application/Control Number: 09/945,072

Art Unit: 2614

made to modify Le Gendre to store the data in the contact database in association with the telephone number as taught by Miyashita. The motivation for the modification is to have doing so in order to retrieve contact information from the storage whenever a person needs to contact without any inconvenience.

Regarding claims 2, 17 and 26, Le Gendre teaches receiving Caller-ID information including the telephone number and associated with an incoming call to the mobile communication device (col.2, lines 19-24, col.3, lines 58-64).

Regarding claims 3, 18 and 27, Le Gendre teaches obtaining a telephone number associated with an outgoing call being placed by a user of the mobile communication device (col.2, lines 19-24, col.3, lines 58-64).

Regarding claims 4, 19, 28 and 35, Le Gendre teaches attempting to locate the data associated with the telephone number in the contact database, wherein said obtaining data associated with the telephone number via the wireless network is performed only after failing to locate the data in the contact database (col.3, lines 58-67, col.4, lines 1-3).

Regarding claims 5, 20, 29 and 36, Le Gendre teaches an agent [i.e., browser] to allow a user of the mobile communication device to navigate hypermedia information, and wherein the obtaining the data associated with the telephone number via the wireless network is done automatically by the browser (col.2, lines 19-24, col.3, lines 53-64).

Regarding claims 6, 21, 30 and 37, Le Gendre teaches automatically requesting the data associated with the telephone number from a remote server via the wireless network when the data connection is established (col.2, lines 19-24, col.3, lines 58-67).

Art Unit: 2614

Regarding claims 8, 23, 32 and 39, **Le Gendre** teaches the obtained data associated with the telephone number comprising name or address information associated with the telephone number (col.3, line 65-col.4, line 1).

Claim 25 is rejected for the same reasons as discussed above with respect to claims 1 and 5.

6. Claims 7, 22, 31 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Le Gendre et al. (U.S. Patent No. 7,099,657) in view of Miyashita (U.S. Pub. No. 2002/0019225) further in view of Ho et al. (U.S. Pub. No. 2002/0194352).

Regarding claims 7, 22, 31 and 38, Le Gendre in view of Miyashita fails to teach "the obtained data associated with the telephone number is contained in a vCard". Ho teaches the obtained data associated with the telephone number is contained in a vCard (page 3, paragraph 0019). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Le Gendre in view of Miyashita to allow the obtained data associated with the telephone number is contained in a vCard as taught by Ho. The motivation for the modification is to have doing so in order to provide name and office telephone number.

7. Claims 9, 24, 33 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Le Gendre et al. (U.S. Patent No. 7,099,657) in view of Miyashita (U.S. Pub. No. 2002/0019225) further in view of Armanto et al. (U.S. Patent No. 6,094,587).

Regarding claims 9, 24, 33 and 40, Le Gendre in view of Miyashita fails to teach "the obtained data associated with the telephone number comprising ring tone data for use to generate a ring tone indicating the incoming voice call". Armanto teaches the obtained data associated with the telephone number comprising ring tone data for use to generate a ring tone indicating the incoming voice call (col.4, lines 21-24, col.7, lines 36-47, col.8, lines 25-30, col.15, lines 28-33). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Le Gendre in view of Miyashita to allow the obtained data associated with the telephone number comprising ring tone data for use to generate a ring tone indicating the incoming voice call as taught by Armanto. The motivation for the modification is to have doing so in order to provide distinctive ringing tone for a particular person.

#### Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Md S. Elahee whose telephone number is (571) 272-7536. The examiner can normally be reached on Mon to Fri from 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on (571) 272-7547. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
